Library of Congress' Class L: Education, Table L7: An Expansion for Local Use

Abstract: Table L7 provides ranges of Cutter numbers, with no directions for the allocation of the numbers within the ranges. For an extensive collection such as a library might assemble of its parent institution's output, more guidance is needed. Between normal institutional changes and multiple catalogers of varying degrees of expertise, the chances of maintaining a logical shelf arrangement over time become vanishingly small. This case study describes the problem that developed as the table was applied to the institutional publications of Georgia State University, and proposes an explicit expansion of Table L7 for local use as a solution. With suitable adaptations to accommodate their specific administrative and academic divisions, this expansion of Table L7 could be helpful to other "one-number institutions" using both Table L7 and Table L13.

Author: Judith M. Shelton, BA, MLS (LIBJMS@LANGATE.GSU.EDU) is currently Database Manager and Assistant Head of the Catalog Department at William Russell Pullen Library of Georgia State University (100 Decatur St., SE, Atlanta, GA 30303-3202). She was Head of the Serials Cataloging Unit for 15 years and continues to act as such until a replacement for that position can be recruited.

Introduction

This case study describes a problem that developed at the Georgia State University's Pullen Library in applying the classification number for official publications of institutions. Georgia State University has been assigned a single whole number in the LD schedule making it a "one-number institution." The solution to the problem, an explicit expansion of "Table L7, Tables of Subdivisions: Institutions With One Number or Cutter Number in Americas, Great Britain," can be adapted for use by other "one-number institutions."

Table 1 lists the serials part of GSU's existing shelflist to illustrate why more explicit guidance in applying Table L7 was felt to be needed. The expansion of the table that was developed is provided in Table 2. Table 3 illustrates the application of the expansion to the same publications listed in Table 1.

To understand how the problem with the classification of the institutional publications at GSU developed, brief reviews of the evolution of the University and of the relevant developments within the L Schedule itself are in order.

Georgia State University

Georgia State University was founded in 1913 as the Georgia Tech Evening School of Commerce. It became an independent college within the newly established University System of Georgia in 1933, but in 1947 it was incorporated into the program of the University of Georgia as its Atlanta Division. It was separated again by the Board of Regents in 1955 and renamed Georgia State College of Business Administration. As the institution expanded beyond its original focus on business, the name was changed in 1961 to simply Georgia State College, and in 1969, having achieved university status, to Georgia

State University. GSU is now the second largest of the 34 public institutions of higher learning in Georgia.¹

Class L: Education

In the Library of Congress classification scheme, publications about individual educational institutions are assigned single numbers or ranges of numbers in the LD and LE Schedules, and these numbers are applied in accordance with tables. In the 3rd edition of *Class L: Education*, published in 1951, the table for institutions to which one number is assigned appeared thus:

TABLE V
(Institutions to which *one number* is assigned)

.A1-7 Official publications
.A8-Z Other works, by author²

It was expanded slightly in the “Additions and Changes to April 1966”:

TABLE V
(Institutions to which *one number* is assigned)

.A1-7 Official publications
.A1-4 Serial
.A5-7 Nonserial
.A8-Z Other works. By author
Including student yearbooks, etc.³

The 4th edition of *Classification, Class L: Education*, published in 1984, extended Table V to institutions to which one Cutter number is assigned.⁴ In the 1995⁵ and 1998⁶ Expansion of L7

editions the table is designated “L7, Tables of Subdivisions: Institutions With One Number or Cutter Number in Americas, Great Britain,” but otherwise remains unchanged. An identical Table, numbered L13, was then established for institutions located in continental Europe, Asia, Africa and Oceania.

. In *Immroth’s Guide to the Library of Congress Classification*, the chapter on the L Schedule is very brief because the schedule “presents no serious problems to the classifier.” The tables of subdivisions for subarranging numbers assigned to individual institutions of education are considered “relatively easy to use,” “similar to tables already covered [in the guide] and so need little further discussion.”⁷

For those tables that prescribe explicit numbers for particular uses this is, indeed, very true. The tables, L7 and L13, for publications about institutions that have been assigned a single whole number or Cutter number, however, are extremely basic: they provide ranges of Cutter numbers only, with no directions as to the allocation of the numbers within the ranges. Few libraries are likely to acquire extensive collections of the official publications of educational institutions other than their own parent institution. For the scattered publications of other institutions a library may acquire, a haphazard application of the ranges provided in Tables L7 and L13 may be acceptable, but for a comprehensive collection such as a university library might assemble of its parent institution’s output, a more systematic approach is needed. An individual cataloger might be able to apply the tables, as they stand, consistently, and achieve a logical shelf arrangement, but in the long run, with multiple catalogers of varying degrees of expertise applying the tables, the chances of maintaining a logical shelf arrangement become vanishingly small. More guidance in the

distribution of these ranges, either from Immroth's Guide or within the schedule itself would have been genuinely helpful to catalogers who have had to apply them over the years.

Classification of GSU's Publications

From 1955, when Georgia State became a separate institution, through the 1960s there was no class number explicitly assigned to the college in the LD Schedule, so local catalogers interpolated LD 1961.G8. The number LD 1965 was assigned to the University at some point between publication of the 1966 printing of the 3rd edition, which includes "Additions and Changes to April 1966," and the publication of the 4th edition in 1984. There is evidence from Pullen Library's old paper shelflist, and in older volumes that had been reprocessed, that a reclassification project was carried out in 1972. This suggests that LD 1965 was assigned to GSU about 1971, probably as a result of the change to university status.

The possibility that a problem had developed was first noticed by the serials cataloging unit. With serials, entry changes follow routinely in the wake of institutional growth and change, and the older cataloging records are revisited on a regular basis. The perception of a possible problem in the way catalogers were applying the assigned classification reached a higher level of awareness when Dr. Noah Langdale, Jr., President of the University from 1957 to 1987, donated to Pullen Library personal copies of his annual reports to the Chancellor of the University System, as well as his personal locally-bound compilations of the annual reports of the divisions of the University to the President. It seemed logical that these university level documents should stand among the first titles in

the LD 1965 serial sequence, but those numbers had been assigned to other, more limited, titles.

These considerations led to a long overdue examination of all the existing LD 1965 call numbers in the serials shelflist. It appeared that over the last 25 years at the hands of successive catalogers of varying degrees of skill, confusion over how to allocate the range of Cutters .A1-7, and more particularly .A1-4 Serials, had led to the current disarray.

[Insert Table 1]

As Table 1 illustrates, there is no readily apparent system or logic to the current arrangement. In the reclassification project of 1972 it appears that an attempt was made to spread the publications across the range alphabetically by subordinate unit of the University. This arrangement, which would have worked well enough if applied consistently and explained to new catalogers, appears to have been muddled by subsequent attempts to insert new titles alphabetically by title. Later catalogers, attempting to apply the table hierarchically, merely added to the disorder.

Further impetus for dealing with the problem that was being observed was the knowledge that a long-term goal that had been identified for the Catalog Department in a recent round of strategic planning was to catalog the Georgia State publications in the Archives Collection. The titles selected for Pullen Library's circulating collection represent only a small fraction of the University's output and so this seemed a logical time to rectify the existing situation and establish an explicit scheme.

Obviously, the key to a logical shelf arrangement is to choose one approach and apply it consistently. Having analyzed the situation, it was decided to establish an explicit

expansion of Table L7 for local use and reclassify the circulating collection of GSU serials while it was still a manageable size.

An Explicit Expansion of Table L7

The expansion that was developed is a hierarchical one. That is, it follows the pattern of general-to-specific found throughout the LC classification schedules: broad topics stand before narrower aspects of topics; works about a country as a whole stand before works about regions or states, which stand before works about cities; alphabetical or chronological breakdowns only occur at the narrower levels to subarrange topics of equal importance. In the case of institutions, works about the whole institution would stand before works about subdivisions of the institution.

This hierarchical approach was chosen for two reasons. First, an alphabetical arrangement, whether by title or by the name of a subordinate administrative unit, soon loses coherence and becomes imperceptible if publications or units change title or name, split, or merge, as dynamic entities are apt to do. To maintain a strictly alphabetic arrangement one must be willing to tolerate scattering related items randomly through the alphabet. The second reason for preferring the hierarchical approach is that all the other tables for institutions (L3, L4, L5, L6, L8, L9, L10, L11, and L12) are organized hierarchically. It seemed reasonable to assume that the Cutter ranges in Tables L7 and L13 were intended to be distributed the same way. This expansion of Table L7 borrows extensively from the other tables between L3 and L12, and especially heavily from L4. The result is shown in Table 2.

[Insert Table 2]

In the range .A1-4 Serials, A1 is dedicated to University level administrative reports, .A2 to College level publications, .A3 to Other Academic Units, and .A4 to Public and Alumni relations. In the expansion as given in Table 2 the range .A22 to .A28 refers to Georgia State University's six colleges, and the range .A32 to .A36 refers to Georgia State University's other academic units. Since the addition of new colleges is rare, sliding the .A2 Cutter only one digit works for GSU and leaves some room for growth. Larger institutions so unfortunate as to be assigned only one number may need to slide the .A2 Cutter two digits to accommodate all their colleges and allow room for growth. Academic Centers and Institutes are more volatile at GSU than the Colleges. They may grow into a College, change name or be discontinued as funding or the perception of their value changes within the institution. The latest edition of GSU's Faculty handbook includes a current list of centers and institutes, and the alphabetical arrangement stipulated in .A35 and .A36 is intended to be based on that list. Other institutions desiring to adapt this expansion to their own use would need to find some similar authoritative list.

To illustrate how this expansion works out in practice, Table 3 shows the same publications listed in Table 1 with new call numbers assigned according to the expansion.

[Insert Table 3]

The examples in Tables 1 and 3 are only the serials that were in GSU's circulating collection at the time work began on this project. Just as the Library on Congress classification as a whole was originally based on literary warrant, the development of this expansion on Table L7 began with an attempt to rationalize the shelf arrangement of these particular serial publications. The identification of a long-term goal to catalog the archival

collection of all the university's publications raised the possibility of extending the project to official nonserial publications with the cooperation of GSU monograph catalogers.

With that possibility in mind, it became necessary to do more than provide a simple breakdown of .A1-4 Serials. For instance, there is no need for an elaborate Biography and History section for serials but the four digit number for the Alumni directory parallels the anticipated expansion under this topic for Monographs which is borrowed from Table L4, substituting "17" for the first digit in the "12" through "15" range of that table. To follow through on the logic of the hierarchical arrangement as exemplified by the other tables, it was necessary to insert a place for nonserial institutional level publications such as the University Charter before .A1. The resulting expansion, which goes far beyond the original intent to regularize a small area of a specific collection, may potentially be of use to catalogers elsewhere.

Conclusion

This case study describes a problem in classification that developed over time at a single institution. On the surface this may seem to be a criticism of the institution's catalogers. In truth, the source of the problem lies in the normal evolution of the institution and the lack of guidance in the use of a table. These factors apply at many institutions. It seems likely that GSU is not an isolated case. The larger an institution that has been assigned a single number by LC grows, the more urgent becomes the need for an explicit framework for the arrangement of its publications. This expansion of "L7, Tables of Subdivisions: Institutions With One Number or Cutter Number in Americas, Great Britain" can be adapted to accommodate the specific administrative and academic divisions of any

Expansion of L7

“one-number institution,: including institutions that use “L13, Tables of Subdivisions: Institutions, Continental Europe, Asia, Africa and Oceania.” While this expansion is primarily intended for local use by “one-number institutions” in arranging their own publications, it can also be useful to any cataloger anywhere for those scattered publications of other institutions their library may acquire.
