Abstract
This poster presents an overview of an exploratory research initiative to examine and assess the viability of development of an institutional repository system at a teaching-oriented mid-size university with minimal monetary commitment. A need has been identified for an institutional repository and necessary steps have been taken to implement it. Several departments worked together to create a prototype Institutional Repository using DSpace, an open source repository software. This poster focuses on the steps taken to set up and the plans to maintain a quality Institutional Repository at Valdosta State University without placing a large demand on the institution's resources.

Customizing the Interface
To further streamline the appearance and workflow process of DSpace, the Manakin interface (XMLUI) is set as the default interface to edit the look and feel of DSpace and personalize it to the institution's needs. Manakin uses Cascading Style Sheets (CSS) to customize the DSpace interface. In addition to providing a more appealing interface than DSpace's native interface (JSPIU), the Manakin interface spells out error messages if there are any inconsistencies in metadata fields and workflows, for example. A staff member with extensive CSS experience from the library software team volunteered to learn and edit the Manakin interface to fit in with the university's existing web presence and guidelines. Though there are quick start guides available (Domouhle, Phillips, & Rallis, 2007) for an average user to customize JSPUI and XMLUI, the learning curve for XMLUI was steeper than for JSPUI.

The Future of the Project
Though developing an IR program may seem relatively cheap and easy to implement at minimal cost, sustaining such a program in terms of keeping the community engaged and maintaining institutional support are key to the success of an IR program. The project team plans for the future focus on a minimal cost approach to maintaining VSU's IR. Plans are in place to use volunteers and interns to upload faculty and student content so there will be even more incentives for creators to deposit their materials in the repository. Though a release form for theses and dissertations exists, it has not been standardized and plans are in place to submit a standardized form to the Graduate School for students to submit with their theses and dissertations electronically. A faculty outreach program in spring 2009 will be initiated to raise awareness about the repository and inform faculty and students about hosting and making their scholarly works available to the public thorough VText.

Our Process
The process began by identifying willing parties within the library and evaluating how their skills could be best applied to the project. Next, the current web presence of digital content created by faculty and students was surveyed to identify candidate materials that could be housed in the repository. Candidate materials for a repository were found in a number of faculty and departmental webpages and in student theses and dissertations. Because Valdosta State is not a large research institution, teaching materials were also identified as a potential source of content.

The next step was to set policies and procedures for the repository. The project needed to set metadata guidelines, file type controls, and copyright controls. It should be noted that policy development can potentially be one of the more time consuming steps in setting up a repository. However, the V-Text team has chosen to save time by surveying other policies and adapting them where appropriate. Already, VSU has received permission to adopt existing policies from other established repositories such as those at Georgia Tech and the University of Texas at Austin.

Identifying the Need
The need for an IR at VSU was first recognized in early 2007 and a pilot project was initiated by the University Archives and Special Collections, Automated Systems, and the Master of Library and Information Science Program. Knowing that any information science program. Knowing that any

Some works may fall into the domain of a topic that shall appear. For the

For the initial stages of the digital repository, the V-Text Management Committee, consisting of members of the library, information technology, and special collections, will be the custodians of the repository. The VSU Digital Repository was established to provide open access to the digital works of the University. In exceptional cases, the repository may only allow access to VSU faculty, staff, and students. Submission restrictions may apply at any time. VSU, the owner of the VSU Digital Repository, reserves the right to remove or delete any electronic content at any time. Copyright owners have the right to request that any electronic content be removed from the VSU Digital Repository.
