BACKGROUND
Mental health concerns are common among today's school-age children, with an estimated one in five children under 18 years of age having a diagnosable mental health disorder.\textsuperscript{1,2} Although most mental disorders can be managed with appropriate treatment, the vast majority of children needing services — an estimated 75% to 80% — do not receive them.\textsuperscript{4,6} The presence of untreated mental disorders can create significant challenges, particularly in the academic environment.\textsuperscript{7} If unaddressed, these problems can impair academic performance, decrease school attendance, and cause behavioral concerns in the learning environment.\textsuperscript{5}

School-based mental health (SBMH) programs provide a continuum of mental health services to students and families in the school setting. By placing mental health professionals in schools, SBMH programs increase access to needed mental health services; promote earlier identification of and intervention for mental health needs; and foster collaboration between mental health providers, school systems, and community stakeholders.

CONCEPTUAL FRAMEWORK
One conceptual model used to guide SBMH is the three-tiered intervention framework, where provision of mental health services fall into three distinct levels (see Figure 1).\textsuperscript{6,8,11,21}
- Tier I programs and activities are generalizable to an entire school and are implemented schoolwide.
- Tier II programs and services target students at risk of developing mental health concerns.
- Tier III services are tailored to a small population of high-risk students and are more intensive interventions.

Figure 1: Three-Tiered Approach to SBMH

Example of Tier III Activities
- Individual therapy for indicated students
- Behavior assessment
- Crisis management services
- Group therapy for indicated students
- Family therapy

Example of Tier II Activities
- Individual therapy for at-risk students
- Group therapy for at-risk students
- Targeted screening
- Check In/Check Out
- Youth Mental Health First Aid

Example of Tier I Activities
- School events
- Parent education
- Mental health awareness events
- Classroom observation
- Social emotional learning curricula and programs
- Universal screenings
- Positive Behavioral Interventions & Supports
- In-service trainings on mental health
PROVIDERS
SBMH professionals can provide services at one or multiple schools. Depending on the program, SBMH providers are either employed by mental health providers that are contracted to provide services within schools or employed directly by schools, school systems, or school districts.\textsuperscript{7, 11}

REFERRALS
Students may be referred to SBMH services by an adult, such as a school social worker, teacher, or counselor, or can be self-referred.\textsuperscript{7, 9} Referrals generally go through a specified process, such as the one depicted in Figure 2.

A teacher may notice a student having behavior problems and refer him/her to the school counselor. The counselor would then determine if that student should be referred on to the mental health professional.

SERVICES
SBMH programs offer students and their families a broad spectrum of mental health services at little to no cost.\textsuperscript{11, 21-23}

BENEFITS
SBMH programs lead to a variety of positive outcomes for students, their families, and schools.\textsuperscript{9-20}

The information presented in this brief comes from two sources: a review of literature on SBMH and interviews with SBMH program implementers across the nation, as well as one national SBMH expert.
