Proposal for Perfect Storms

History's Perfect Storms

Every so often, nature and human forces collide in a great way and provoke disasters that change the world forever. These are nature's perfect storms. Our weather system has a particular pattern to it; we have fronts that create thunderstorms, tornados, hurricanes; but why sometimes do all these storms come together to create such a spectacular event? Only recently has human testimony been introduced to add another layer of evidence to these series of perfect storms. Through research, my goal is to get inside these storms and explain what happens from the inside out. Why did these storms occur, and what would it be like to experience them first hand? Through my research as well, I want to see if I can discover any patterns about these storms, maybe a way to predict when such storms could take place. Take a ride through history and experience the rarity that nature provides us with this awe inspiring perfect storms.

Key Words

- Perfect Storm
- Weather
- Elements
- Hurricane
- Tornado
- Storm(s)
- Fronts
- Pressure Systems
